

FOAM CHAMBERS

FEATURES

- **UL Listed and FM Approved with multiple SOLBERG® fluorine-free foam concentrates**
- **Available in four size ranges**
- **Equipped with an inspection opening on the cover plate**
- **Minimum operating pressure 40 psi (3 bar), maximum operating pressure 100 psi (7 bar)**
- **One-piece welded chambers are available for installations not requiring vapor seal**

DESCRIPTION

SOLBERG® Foam Chambers are NFPA-11 Type II air aspirating foam discharge devices that provide protection for open top floating and cone roof flammable liquid storage tanks. Foam chambers are a combination of a foam mixing chamber and a foam maker with an air inlet. A removable orifice plate is located between the flange inlet and solution pipe flange, and is sized to deliver the required foam solution at a specified pressure. A frangible glass vapor seal located in the foam chamber body prevents product vapors from entering the foam chamber body. The vapor seal will break once the foam solution enters, filling the foam chamber body with expanded foam. The foam flows to a deflector plate, which directs the foam to the inside of the storage tank wall and fuel surface, only allowing minimum foam submergence and fuel agitation.

APPLICATION

SOLBERG Foam Chambers are airaspirating Type II discharge devices that protect various types of flammable liquid storage tanks including cone roof tanks (with or without internal floaters) and open top floating roof tanks. The foam chambers are typically used with bladder tank systems or balanced pressure pump systems.

SPECIFICATIONS

The foam chamber assembly consists of the body, integral foam maker, orifice, deflector, vapor seal, gaskets and mounting hardware. The foam chamber body is constructed of steel. The inlet fitting is a raised face 150 lb flange, and the outlet fitting is a flat faced flange that can be bolted or welded to the storage tank. Foam chamber body has a cover plate with inspection opening for ease of inspection or access to the vapor seal. Vapor seal is constructed from glass and designed to meet the UL required burst pressure range of 10 - 25 psi (1 - 2 bar). The deflector plate can be either solid or split-type and constructed from steel that can be bolted or welded to side of storage tank.

Note: The deflector plate is not supplied with foam chamber and needs to be ordered/specified separately.

CERTIFICATIONS

- Underwriters Laboratories, Inc. (UL) Listed - Standard 162
- FM Approved per Approval Standard 5130

ORIFICE PLATE SIZING

English

$$D = \sqrt{\frac{Q}{29.8 \times C \times \sqrt{P}}}$$

Metric

$$D = \sqrt{\frac{Q}{0.6659 \times C \times \sqrt{P}}}$$

Key

- Q = Flow in GPM
- D = Diameter of Orifice in Inches
- C = Coefficient of Discharge for the Orifice (See C factor above)
- P = Pressure in psi
